Shake Detector | Assignment 1 | Disha Singh

Complete Status: COMPLETED (REQUIRED completed, BONUS partially done)

Most Challenging Part:

I opened two windows at a time so that I could see the Class Demo in one window and my project in the other window. But, post that I have not been able to bring up the emulator in my window, I tried multiple things, but none helped. I am still not able to see the emulator in existing projects. How I worked forward for this assignment was that I created another project from scratch again where the emulator is already present by default.

Camera functionality: Could create Camera button, on clicking which you can open Camera and click a photo.

Unfinished Bonus Parts: (All Code in MainActivity.java)

I tried to create the Camera functionality for Bonus points, but apart from creating an ImageView, I could create a Button which opens the Camera app. After clicking the photo, I am not able to show it on ImageView.

I did not have time for Voice Recording feature but created a button.
